Request on `sakila_1`: “For each film rating, what is the average rental price per day?”

read as A

Reading A: mean of daily prices

```
SELECT rating,
AVG(rental_rate /
    rental_duration)
FROM film GROUP BY rating
```

result: G 0.668, PG 0.642, R 0.662

read as B

Reading B: ratio of two averages

```
SELECT rating,
AVG(rental_rate) /
AVG(rental_duration)
FROM film GROUP BY rating
```

result: G 0.597, PG 0.600, R 0.616

Request set (shortened): wording, and the answers counted correct

specific, A	“the average of each film’s daily price”	A
specific, B	“average price divided by average duration”	B
open	“average rental price per day”	A or B, choice named

Four models’ responses to the open request

	Haiku	Sonnet	GPT-Sol	GPT-Luna
returns A	✓	✓	✓	✓
names the choice	✗	✓	✗	✓
also returns B	✗	✓	✗	✗
