Request (financial database); shaded: the requirements the rewrite lost

"For each district, list its id, its region, the client count, that count divided by its region's total, and that count divided by the overall total. Show the 10 districts …"

Rewritten as one interpretation

"Clients are attributed to the district of each account they are linked to via disp…"

SQL from the rewrite: wrong, without the shaded requirements

Kept, with one clause added for the interpretation

the request above, unchanged, + one sentence naming the interpretation

SQL: right
